Reading the intangibles

What an AI that reads every answer finds that people miss

Joe Black, Dreamscope

ON YOUR PHONE OR LAPTOP

300 survey comments.

One week to tell the CEO what's really going on.

How would you do it?

Answer in one to three words.

cloud.dreamscope.win/cog

WHO’S TALKING

I’m an operator, not a developer.

I take expert work and train AI to do it. Months of work becomes days.

20 years
running operations and teams

10 years
in Vietnam

Shipped
a culture diagnostic and a hiring screener

Your brain can only hold a few answers at a time.

Read 20 comments and the picture is clear.

Read 300 and it only hangs onto the standouts.

THE SURVEY: EMPLOYEE NET PROMOTER SCORE

It’s the eNPS: one number and one why

THE ENPS QUESTION

0 to 10

How likely are you to recommend working here to friends and family?

THE WHY

Why?

Open text, in any language, right after the score.

A beautiful single question that surfaces what truly matters.

UNDER THE HOOD

Five steps from an answer to a decision

1

Collect

One score and one why, anonymous

→

2

Classify

AI sorts every answer against 20 factors

→

3

Check

A person checks a sample every round

→

4

Report

What people said, kept apart from our interpretation

→

5

Deliver

Walked through live, ending in dated commitments

UNDER THE HOOD

Every answer is read in the language it was written in

253
answers in Vietnamese

31
answers in English

1
report, in English, for the leaders

THE 20 DREAMSCOPE FACTORS

Every answer gets sorted against 20 factors

The system

Workspace & Tools
Processes & Role Clarity
Communication & Transparency
Fairness & Inclusion
Pay, Benefits & Security
Learning & Development

The people

Senior Leadership
My Manager
My Team & Belonging
Collaboration
Feeling Valued
Psychological Safety

The work

Autonomy
Purpose & Pride
Feedback
Workload & Pressure
Intrinsic Motivation

The person

Work-Life Balance
Energy & Health
Support Through Change

Sounds simple, right?

It took hundreds of hours of trial and error, and writing down every rule,
to get the AI to answer consistently and well.

HOW I TRAINED IT

How I taught the AI to read like me

ONCE

1. Give it a report I built by hand, plus the raw survey answers and interview transcripts.
2. Ask it to work backwards: how do you get from this to that?

THEN, OVER AND OVER

3. **Fresh chat, no context. Go.**
4. **Review the massive fuckups**
5. **Ask it why, like a person**
   Then explain my expert view.

Until it gives better answers than I do and the errors are tiny.

I started on Gemini. It runs on Claude today.

Throw your stuff at a generic AI and you get AI slop.

Teach it what good looks like and you get AI gold.

UNDER THE HOOD

What the rounds of corrections built

Definitions

One line per factor, in plain words.

Tie-break rules

Which factor wins when two could fit.

Tone rules

Complaint, praise or suggestion. No guessing a tone that isn’t there.

Permission to say “Unsure”

Guessing is worse than not knowing.

The factors come from published organizational psychology. The sorting rules are mine, refined on real answers.

UNDER THE HOOD

One answer can touch several factors

“Friendly working environment, lovely colleagues, very good benefits. There were a few changes in 2025 but on the whole they were for the entire company.”

+ My Team & Belonging **+ Pay, Benefits & Security** **~ Support Through Change**

Translated from Vietnamese · + positive · ~ mixed or neutral

“Great place to work.” → **Unsure** Too vague to place. That’s a real answer.

THE INTANGIBLES

People tell the story.
The AI names the factor.

“One-way, not two-way. You’re told once, there’s no discussing it.”

Psychological Safety

“Growing really fast… the weakness is going too fast and forgetting to keep things from the beginning.”

Purpose & Pride

“Decisions are still made according to a pyramid structure.”

Senior Leadership

TIE-BREAK RULES

When the AI wasn’t sure, I made the call. Now it’s a rule.

Recognition or information?

“Nobody says thank you.”

Feeling Valued

vs

“Nobody tells me how I’m doing.”

Feedback

One boss or the bosses?

“My boss never listens.”

My Manager

vs

“The bosses never listen.”

Senior Leadership

The rules or the trust?

“The process is rigid.”

Processes & Role Clarity

vs

“I’m not trusted to decide anything.”

Autonomy

ON YOUR PHONE OR LAPTOP · THE ENPS

Think of your current job or a past one. How likely are you to recommend working there to friends and family?

0 to 10 first, then why. Claude reads every answer while we keep going.

cloud.dreamscope.win/cog

We’ll come back to these later.

Let’s give Claude a moment to think.

ON YOUR PHONE OR LAPTOP · ONE SHORT SENTENCE

People complain about pay. What would you do?

Up to 140 characters.

cloud.dreamscope.win/cog

WHAT IT FINDS · 1 OF 3

Pay complaints come with workload

11 of 20

people who mention workload also mention pay

15 of 23

people who complain about pay mention something else too, workload most often

> *“I work a lot, but the pay is low.”*
>
> Factory, scored 0, translated from Vietnamese

WHAT IT COULD MEAN

We think a raise alone may not fix it.

The action plan has no pay initiative.

From an anonymized sample report. Evidence on the left, our interpretation on the right, always kept apart.

WHAT IT MEANS · 1 OF 3

Complaints about salary are generally not about salary.

It’s “I don’t get paid enough to deal with this crap.”

Back to your eNPS results.

Let’s see what Claude found.

LIVE · YOUR ENPS, READ BY CLAUDE

Here’s what Claude found in your answers

One answer at a time: the score, the why, and the factors it touched.

ON YOUR PHONE OR LAPTOP · ONE SENTENCE

One region’s eNPS fell from +13 to −7 in a year.

Number 1 complaint was workload.

What do you do?

eNPS runs from −100 to +100. A 20-point drop is huge!

cloud.dreamscope.win/cog

WHAT IT FINDS · 2 OF 3

Six signals, two sources, one leader

THE ENPS SURVEY · 43 ANSWERS FROM THE REGION

Workload complaints at twice the company rate

eNPS fell from +13 to –7

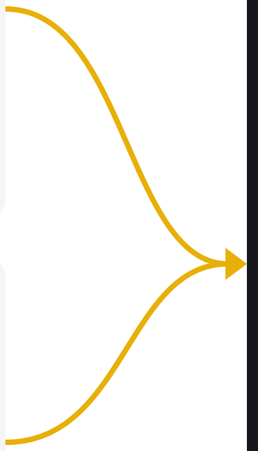

0 people praised a manager, 5 complained

THE LEADER INTERVIEWS

Supervisors describe too much work, not enough people

One supervisor: “It’s not short headcount, it’s mentality.”

The regional leader never takes a day off and says delegation isn’t working

ONE LEADER

A regional leader who is always on

WHAT IT COULD MEAN

Her team seems to match her hours without being asked.

A coaching conversation about pace and delegation may do more than a pay raise.

WHAT IT FINDS · 3 OF 3

Your team feels growth. Leaders see no training system.

THE TEAM, IN THE SURVEY

81%

of training mentions are positive (39 of 48)

THE LEADERS, IN INTERVIEWS

65%

of leader comments on training are negative (39 of 60)

WHAT IT COULD MEAN

Colleagues train each other on the job, and it works. Leaders look for a company-wide system and don’t see one. **It’s real training. It just lives in people, not a system.**

LIVE

The real report

A quick look at a 31-page report. Every number counted by code.

WHAT KEEPS IT HONEST

Four rules that keep the AI honest

A person checks the AI

At least two answers per factor, plus every flagged answer, every time the survey runs.

Code does the math

Every number is counted by code. The AI never does the math.

Evidence kept apart

Quotes and counts in one place. Our interpretation sits under “What it could mean.”

Safety first

A safety concern reaches the client within 24 hours after the survey closes, and is never quoted.

The AI guides.

A person decides.

ON YOUR PHONE OR LAPTOP

Questions

Type yours. They come up in the order they arrive.

cloud.dreamscope.win/cog

What did you get out of this, and what will you try?

We’ll go around. One minute each.

ON YOUR PHONE OR LAPTOP · I'M ALWAYS TRYING TO IMPROVE

Help me make the next cohort session better

I like…

One thing to keep.

I wish…

One thing to change.

cloud.dreamscope.win/cog

Dreamscope

Thank you

Everything works better if people love what they do.
